IIM– GETTING STARTED PART 1 REGISTERING IIM SYSTEM

Start by opening a browser. A browser is a program such as Internet Explorer, Google Chrome or Mozilla Firefox. I am going to use Mozilla Firefox, known by many as just Firefox. Most browsers are very similar and which browser you use really should not matter, as they should display the same pages.

There are Two Important things to Note when filling out this form.

- 1) The user-name that you select will be used In the system. and in your funnels, so make it something “business-like”. Do NOT use any symbols in your User-name, (Such as ?,#@!&^%\$*()). You may use an underscore or a hyphen,

If you have a company, it can be the Company’s name, or your name. I used my first initial and last name, as you could see.

- 2) Make sure you remember the password you use to fill this form out, (and the email address as well), you will need them in the very next screen.
